

EYES ON THE SKY

Caring for the future

At ESO we act responsibly by addressing broader societal issues.

We foster diversity and inclusion by taking action to improve our organisational culture, all the way from how we recruit and train our staff to how we allocate observing time on our telescopes.

We are putting in place a Sustainability Action Plan to reduce our carbon footprint. As part of a new model of operating our telescopes, we have inaugurated a 9-MW solar array to power present and future facilities at ESO's Paranal Observatory.

We are also charting a more sustainable future from a social and economic point of view. We are investing in future generations, by supporting early-career professionals, enabling women in local communities to develop new technical skills, helping teachers engage their students and inspiring the wider public.
